

Complete Command List

1. Open terminal in VS Code (Ctrl + `)
2. Create virtual environment
`python -m venv venv`
3. Activate virtual environment (CHOOSE ONE based on your OS)

For Windows:
`venv\Scripts\activate`

For Mac/Linux:
`source venv/bin/activate`
4. Install required packages
`pip install fastapi uvicorn sqlalchemy`
5. Run the application
`uvicorn main:app --reload`

Quick Copy-Paste Block (Windows)

```
python -m venv venv
venv\Scripts\activate
pip install fastapi uvicorn sqlalchemy
uvicorn main:app --reload
```

Quick Copy-Paste Block (Mac/Linux)

```
python3 -m venv venv
source venv/bin/activate
pip install fastapi uvicorn sqlalchemy
uvicorn main:app --reload
```

After running last command

- Open a browser and go to `http://127.0.0.1:8000`.
 - Press Ctrl + C to stop the server.

This is the complete list of commands required to execute the project in VS Code.
